PROFESSIONAL SUMMARY

Backend-focused Fullstack Engineer with 4+ years of experience building scalable APIs, real-time systems, and distributed backend architectures using Node.js, React, and PostgreSQL. Strong expertise in asynchronous processing using Redis and BullMQ.

Hands-on experience in CRM development, high-volume webhook processing, and integrating telephony, email, and messaging platforms. Implemented AI-powered features such as lead generation and call recording analysis to enhance business workflows.

Skilled in performance optimization, database tuning, and deploying production-grade systems using Docker and AWS.

KEY ACHIEVEMENTS

- Improved PostgreSQL performance by 30%+ through query optimization and indexing strategies
- Built scalable backend systems handling 100K+ transactions with high reliability
- Designed async processing pipelines using Redis and BullMQ for webhook handling
- Reduced API latency using caching and optimized data flow
- Developed 5+ production-grade applications including CRM and real-time systems
- Implemented AI-driven lead generation and call analysis features in CRM
- Enhanced system reliability using queue-based architecture and fallback strategies

TECHNICAL SKILLS

Languages & Frameworks: Node.js, Express.js, React.js, .NET Core

Databases: PostgreSQL, SQL Server, MongoDB, MySQL

Caching & Queues: Redis, BullMQ

Cloud & DevOps: AWS, Docker

APIs & Integrations: REST APIs, Webhooks, Twilio, Brevo, Gupshup

Core Concepts: System Design, Distributed Systems, Async Processing, High Concurrency

AI & Automation: AI API Integration, Workflow Automation, Call/Data Analysis

PROFESSIONAL EXPERIENCE

• VI Exports Pvt. Ltd.

Dec 2024 – Present

Senior Fullstack Developer

Delhi, India

- Built and scaled CRM platform using Node.js, React, PostgreSQL, and Redis
- Handled high-volume webhook processing using BullMQ queues to prevent DB overload
- Integrated Twilio, Brevo, and Gupshup for multi-channel communication workflows
- Optimized PostgreSQL queries and indexing improving performance by 30%+
- Implemented AI-based lead generation and call recording analysis features
- Designed caching strategies reducing database load and improving API performance
- Deployed containerized applications using Docker on cloud infrastructure

- **DAPS**

Software Engineer

Oct 2023 – Dec 2024

Noida, India

- Developed scalable full-stack applications using Node.js, React, and MongoDB
- Designed REST APIs and optimized SQL Server queries improving performance by 20%
- Contributed to system architecture reducing development time by 15%

- **Absolute Dimensions Pvt. Ltd.**

Software Developer

Jun 2021 – Jul 2023

Patna, India

- Built MERN stack applications and optimized MySQL databases for large datasets
- Developed responsive UI using React.js for enterprise applications

PROJECTS

- **CRM Platform:** Designed and built an in-house CRM system using Node.js, PostgreSQL, Redis, and BullMQ. Implemented high-volume webhook processing, multi-channel communication (Twilio, Brevo, Gupshup), and AI-powered lead generation and call recording analysis. Used queue-based architecture to handle concurrent workloads and prevent database overload.
- **LINR-Valuation:** Developed a property valuation platform that automates report generation and integrates external data sources. Optimized backend workflows to reduce manual effort and improve processing efficiency.
- **North Eye:** Built a legal advisory platform enabling secure document exchange and real-time consultation between clients and advisors. Implemented authentication, role-based access, and real-time communication features.
- **Grata E-Shop:** Developed a scalable e-commerce platform with product catalog, order management, and payment integration. Focused on backend performance, efficient inventory handling, and API design.
- **ARSIM:** Created a real-time auction platform supporting live bidding, event-driven updates, and automated notifications. Designed backend to handle concurrent users and real-time data flow.
- **Astute:** Built an insurance claim management system with API integrations, report uploads, and claim tracking workflows. Improved operational efficiency through structured data processing and automation.

EDUCATION

- **KNIT, Sultanpur**

MCA

- **SRC, Muzaffarnagar**
